

Website Handover Document.

Step-by-step guide to transferring full ownership of the Casa Nova website.

To be completed upon receipt of payment.

PREPARED FOR

Esther Nyambura Ngumi

Casa Nova Global Sourcing Interiors · Karen, Nairobi, Kenya

LIVE WEBSITE

<https://2bx7mx96fj-oss.github.io/casanova-site/>

IMPORTANT

Do not begin any transfer steps until payment has been confirmed in full.

Once transferred, the website and all associated assets belong to the client.

Transferring Ownership

1 Confirm Payment

Ensure £350 has cleared in full to your bank account before proceeding. Do not begin transfer until funds are confirmed.

2 Esther Creates a GitHub Account

Go to github.com and click Sign Up. Use a professional email. Recommended username: [casanovaglobal](https://casanovaglobal.com) or [casanovainteriors](https://casanovainteriors.co.ke). Complete email verification (takes 2 minutes). Share your username with the developer.

3 Esther Creates a Namecheap Account & Buys Domain

Go to namecheap.com, create an account, and search for your preferred domain (e.g. casanovaglobal.com or casanovainteriors.co.ke). Purchase on your own card — this is your asset.

4 Connect Domain to Website (DNS Setup)

In Namecheap: Domain List > Manage > Advanced DNS. Add 4 A Records pointing @ to: 185.199.108.153 / 185.199.109.153 / 185.199.110.153 / 185.199.111.153. Add CNAME: [www](https://www.2bx7mx96fj-oss.github.io) pointing to 2bx7mx96fj-oss.github.io.

5 Set Custom Domain on GitHub

In the GitHub repository: Settings > Pages > Custom Domain. Enter your domain and save. Tick Enforce HTTPS once available. DNS propagation takes 10–30 minutes.

6 Transfer GitHub Repository

Developer goes to: github.com/2bx7mx96fj-oss/casanova-site > Settings > scroll to Danger Zone > Transfer. Enter repository name to confirm, then enter your GitHub username. You will receive an email — click Accept Transfer within 24 hours.

7 Confirm Everything is Working

Visit your custom domain in a browser. Confirm the site loads correctly. Confirm HTTPS padlock is visible. The website is now fully yours.
