

Website Handover Document.

Step-by-step guide to transferring full ownership

of the Casa Nova website upon payment completion.

PREPARED FOR

Esther Nyambura Ngumi

Casa Nova Global Sourcing Interiors · Karen, Nairobi

WEBSITE

<https://2bx7mx96fj-oss.github.io/casanova-site/>

What's covered in this document:

- Step 1 — Confirming payment
- Step 2 — Creating a GitHub account
- Step 3 — Transferring the website repository
- Step 4 — Setting up a custom domain (optional)
- Step 5 — Final handover checklist

Steps 1 – 3

01

Confirm Payment Received

- Agree the final invoice amount and send it to Esther before or during the review call.
 - Request payment via bank transfer (preferred) or PayPal. Do not begin the transfer until funds are cleared.
 - Once payment is confirmed in your account, proceed to Step 2.
 - Keep a copy of the payment confirmation for your records.
-

02

Esther Creates a GitHub Account

- Ask Esther to go to github.com and click "Sign up".
 - She should use a professional email address (e.g. her business email).
 - Recommended username: [casanovaglobal](#) or [casanovainterior](#).
 - She completes email verification — this takes less than 2 minutes.
 - She sends you her GitHub username once done.
-

03

Transfer the Website Repository

- You go to: github.com/2bx7mx96fj-oss/casanova-site
- Click "Settings" (top menu of the repository).
- Scroll to the bottom — find the "Danger Zone" section.
- Click "Transfer" — type the repository name to confirm.
- Enter Esther's GitHub username as the new owner.
- Click "I understand, transfer this repository."
- Esther will receive an email — she must click "Accept Transfer" within 24 hours.
- Once accepted, the site is fully under her GitHub account.

Steps 4 – 5

04

Custom Domain (Optional but Recommended)

- Currently the site lives on a free GitHub Pages URL. A custom domain (e.g. casanovaglobal.com) looks far more professional.
- Esther purchases a domain via Namecheap, GoDaddy, or Google Domains (~\$12–15/year).
- In her GitHub repo: Settings → Pages → Custom Domain → enter the domain.
- In her domain registrar: add a CNAME record pointing to her GitHub Pages URL.
- GitHub will issue a free SSL certificate automatically (takes ~10 minutes).
- This step is optional — the site works without it.

05

Final Handover Checklist

- ☐ Payment confirmed in your account
- ☐ Esther's GitHub account created and username received
- ☐ Repository transferred and Esther has accepted
- ☐ Confirm the live site still loads correctly after transfer
- ☐ Share login credentials for any third-party tools (if applicable)
- ☐ Walk Esther through how to update the contact number or text if needed
- ☐ Agree on any post-launch support terms (e.g. 30-day minor fixes)

IMPORTANT NOTE

Do not transfer the repository until payment has fully cleared. Once transferred, you no longer control the site. Keep a local backup of all files before transferring.
